SUMMARY

Information Technology student with hands-on experience in software development, QA testing, automation, and AI-assisted development. Skilled in C#, Java, Python, and Unity, with practical experience building automated testing systems and software projects through internships and academics. Strong problem-solving and programming skills with a quick-learning mindset, eager to contribute to innovative, data-driven products.

EDUCATION

- **B.Tech in Information Technology** • **CGPA-7.06**
St. Joseph's College of Engineering, Chennai

INTERNSHIPS

Intellect Design Arena, Navalur

Technical Support Intern | Duration: 1 Month

- Troubleshoot Java-based issues and worked with automation testing, XPath, demos, and technical documentation.
- Developed Report Optimiser, a mini project for analyzing reports and extracting useful data for faster decision-making.

Trusty Bytes, Ekkatuthangal

Unity Development / RPA Intern | Duration: 1.5 Months

- Learned Unity game development using C#, including scene design, prefabs, animations, and gameplay workflows.
- Developed basic RPA and Python solutions to automate business processes and improve efficiency.

Innovate IT

Prompt Engineer Intern | Ongoing (2 Months)

- Collaborating with mentors to develop and refine AI prompts for software development and SDLC workflows.
- Designing prompts to improve the speed, efficiency, and quality of AI-assisted software development.

PROJECTS

Behavioral Biometrics Password Analyzer:

- Built a security-focused authentication system that analyzes user typing patterns and keystroke dynamics for behavioral verification.
- Implemented behavioral biometrics techniques to detect unusual login behavior and enhance password security.
- Designed the system to improve authentication reliability by combining traditional password validation with user behavior analysis.

Unity QA & Automated Replay Testing System :

- Developed a Unity-based QA framework for automated gameplay testing and validation.
- Implemented a gameplay recording and replay system to capture, store, and reproduce player interactions for deterministic testing.
- Designed automated test workflows to validate gameplay behavior, input handling, and replay accuracy across multiple test scenarios.

Report Optimizer: (Intellect Design Arena):

- Developed an automated report optimization tool to improve report organization, formatting, and processing efficiency.
- Implemented data processing and structuring techniques to generate cleaner and more readable outputs.
- Reduced repetitive manual tasks by streamlining report generation and improving workflow productivity.

SKILLS

- **Programming:** Java, Python, C#, HTML, CSS, JavaScript (Basic)
- **Core:** Problem Solving, OOP, QA Testing, Automation
- **AI & Automation:** Prompt Engineering, AI-assisted Software Development, RPA
- **Tools:** Unity, Git, GitHub, VS Code
